AS Citadele banka

Risk management and capital adequacy report (pillar 3 disclosures)

For the twelve months ended
31 December 2023

CONTENTS

REGULATORY SCOPE

Name of the table	CRR or EBA GL reference
Introduction	
Consolidation Group	CRR Article 436
EU LI3 – Outline of the differences in the scopes of consolidation (entity by entity)	CRR Article 436(b)
EU LIA – Explanations of differences between accounting and regulatory exposure amounts	CRR Article 436(b)
EU LI1 – Differences between the accounting scope and the scope of prudential consolidation and mapping of financial statement categories with regulatory risk categories	CRR Article 436(c)
EU LI2 – Main sources of differences between regulatory exposure amounts and carrying values in financial statements	CRR Article 436(d)
EU LIB – Other qualitative information on the scope of application	CRR Article 436(f-h)
Governance	CRR Article 435(2)(a)
EU OVB - Disclosure on governance arrangements	CRR Article 435(2)(a-e)
Risk Management	CRR Article 435(1)(a-f), 435(2)(d-e)
Capital Adequacy Calculation	
Regulatory capital requirements of the Group	
Capital adequacy ratio	
Fully loaded capital adequacy ratio	
Own Funds	CRR Article 437(1)(a-d)
EU CCA: Main features of regulatory own funds instruments and eligible liabilities instruments	CRR Article 437(b,c)
EU CC1 - Composition of regulatory own funds	CRR Article 437(a,d,e,f)
EU CC2 - reconciliation of regulatory own funds to balance sheet in the audited financial statements	CRR Article 437(a)
EU KM1 - Key metrics template	CRR Article 447(a-g), 438(d)
EU 2017/2395, IFRS 9-FL: Comparison of institutions' own funds and capital and leverage ratios with and without the application of transitional arrangements for IFRS 9 or analogous ECLs	EU 2017/2395
EU OV1 – Overview of total risk exposure amounts	CRR Article 438(d)
EU INS1 - Insurance participations	CRR Article 438(f)
EU INS2 - Financial conglomerates information on own funds and capital adequacy ratio	CRR Article 438(g)
Credit Risk and credit risk mitigation (CRM)	CRR Article 453 (a-g), 438(1)(c-f), 440(1)(a), 442 (a-d,g-h), 444
EU CRA: General qualitative information about credit risk	CRR Article 435(1) (a,b,d,f)
EU CRB: Additional disclosure related to the credit quality of assets	CRR Article 442(a-b)
EU CQ4: Quality of non-performing exposures by geography	CRR Article 442(c,e)
EU CQ5: Credit quality of loans and advances to non-financial corporations by industry	CRR Article 442(c,e)
EU CR1: Performing and non-performing exposures and related provisions	CRR Article 442(c,f)
EU CR1-A: Maturity of exposures	CRR Article 442(g)
EU CQ3: Credit quality of performing and non-performing exposures by past due days	CRR Article 442 (d)
EU CRC – Qualitative disclosure requirements related to CRM techniques	CRR Article 453(a-e)
EU CR3 – CRM techniques overview: Disclosure of the use of credit risk mitigation techniques	CRR Article 453(f)
EU CRD – Qualitative disclosure requirements related to standardised approach	CRR Article 444 (a-d)
EU CR4 – Standardised approach – Credit risk exposure and CRM effects	CRR Article 453(g,h,i), 444(e)
EU CR5 – Standardised approach	CRR Article 444(e)
EU CCyB1 - Geographical distribution of credit exposures relevant for the calculation of the countercyclical buffer	CRR Article 440(a)
EU CCyB2 - Amount of institution-specific countercyclical capital buffer	CRR Article 440(b)
EU CQ1: Credit quality of forborne exposures	CRR Article 442(c)
Counterparty credit risk	CRR Article 439
EU CCRA-Qualitative disclosure related to CCR	CRR Article 439(a-d), 431(3)(4)
EU CCR1 – Analysis of CCR exposure by approach	CRR Article 439(f,g,k)
EU CCR2 – Transactions subject to own funds requirements for CVA risk	CRR Article 439(h)
EU CCR3 – Standardised approach – CCR exposures by regulatory exposure class and risk weights	CRR Article 439(l)
Securitization	CRR Article 449
EU-SECA - Qualitative disclosure requirements related to securitisation exposures	CRR Article 449(a-i)
EU-SEC1 - Securitisation exposures in the non-trading book	CRR Article 449(j)
EU-SEC3 - Securitisation exposures in the non-trading book and associated regulatory capital	CRR Article 449(k(i))

requirements - institution acting as originator or as sponsor	
EU-SEC5 - Exposures securitised by the institution - Exposures in default and specific credit risk adjustments	CRR Article 449(l)
Encumbered and Unencumbered assets	CRR Article 443
EU AE1 - Encumbered and unencumbered assets	CRR Article 443
EU AE2 - Collateral received and own debt securities issued	CRR Article 443
EU AE3 - Sources of encumbrance	CRR Article 443
EU AE4 - Accompanying narrative information	CRR Article 443
Leverage Ratio	CRR Article 451
EU LR2 - LRCom: Leverage ratio common disclosure	CRR Article 451(1)(a-c), 451(2)(3)
EU LR1 - LRSum: Summary reconciliation of accounting assets and leverage ratio exposures	CRR Article 451(1)(b)
EU LR3 - LRSpl: Split-up of on balance sheet exposures (excluding derivatives, SFTs and exempted exposures)	CRR Article 451(1)(b)
EU LRA: Disclosure of LR qualitative information	CRR Article 451(1) (d, e)
Market risk	CRR Article 445, 447, 448
EU MR1 – Market risk under the standardised approach	CRR Article 445
EU MRA: Qualitative disclosure requirements related to market risk	CRR Article 435(1)(a-d)
EU IRRBBA - Qualitative information on interest rate risks of non-trading book activities	CRR Article 448
EU IRRBB1 - Interest rate risks of non-trading book activities	CRR Article 448
Liquidity risk	CRR Article 451a
EU LIQA - Liquidity risk management	
EU LIQ1 - Quantitative information of LCR	CRR Article 451a(2)
EU LIQB on qualitative information on LCR, which complements template EU LIQ1	CRR Article 451a(2)
EU LIQ2: Net Stable Funding Ratio	CRR Article 451a(3)
Operational risk	CRR Article 446
EU ORA - Qualitative information on operational risk	CRR Article 435(1), 446,454
EU OR1 - Operational risk own funds requirements and risk-weighted exposure amounts	CRR Article 446, 454
Internal Capital Adequacy Assessment Process	CRR Article 438(a,c)
Significant risks based on the latest ICAAP assessment for which internal capital was allocated	CRR Article 438(a,c)
Prudential disclosures on Environmental, Social and Governance (ESG) risks	CRR Article 449a
EU 2022/2453 Table 1 - Qualitative information on Environmental risk	CRR Article 449a
EU 2022/2453 Table 2 - Qualitative information on Social risk	CRR Article 449a
EU 2022/2453 Table 3 - Qualitative information on Governance risk	CRR Article 449a
EU 2022/2453 Template 4: Banking book - Climate change transition risk: Exposures to top 20 carbon-intensive firms	CRR Article 449a
EU 2022/2453 Template 10 - Other climate change mitigating actions that are not covered in the EU Taxonomy	CRR Article 449a
EU 2022/2453 Template 1: Banking book- Climate Change transition risk: Credit quality of exposures by sector, emissions and residual maturity	CRR Article 449a
EU 2022/2453 Template 2: Banking book - Climate change transition risk: Loans collateralised by immovable property - Energy efficiency of the collateral	CRR Article 449a
EU 2022/2453 Template 5: Banking book - Climate change physical risk: Exposures subject to physical risk	CRR Article 449a
EU 2022/2453 Template 6 Summary of GAR KPIs	CRR Article 449a
EU 2022/2453 Template 7 - Mitigating actions: Assets for the calculation of GAR	CRR Article 449a
EU 2022/2453 Template 8 - GAR (%)	CRR Article 449a

INTRODUCTION

This report provides an interim update on the qualitative and quantitative disclosures on the major risks of operations of AS Citadele banka and its risk management objectives, policies and information on capital adequacy as required by part eight of the Regulation (EU) No 575/2013 "On prudential requirements for credit institutions and investment firms and amending Regulation (EU) No 648/2012" and other relevant regulations and laws.

This report should be read in conjunction with the latest annual report, the relevant quarterly financial statements, the report on remuneration policy and the statement on corporate governance as certain important information is disclosed in these reports and is not repeated in this report. These reports are available at www.cblgroup.com.

Refer to the separate report on remuneration policy for disclosures on remuneration prepared in accordance with the requirements of Articles 74(3) and 75(2) of Directive 2013/36/EU and Article 450 of Regulation (EU) No 575/2013, guidelines of European Banking Authority (including EBA/GL/2021/04), regulations issued by the supervisory authorities and other relevant rules.

AS Citadele banka has subsidiaries, which are financial institutions, thus it needs to comply with the capital adequacy, liquidity coverage ratio (LCR), Net stable funding ratio (NSFR), leverage ratio (LR) and other regulatory requirements both at the Bank's standalone level and at the Group's consolidated level. However, in line with the pillar 3 disclosure requirements information in the Risk report is disclosed only at the Group's consolidated level. For key information on the Bank standalone position refer to the latest annual report and the relevant quarterly financial statements.

All monetary figures in this report are presented in thousands of Euros (EUR 000's). If not specified otherwise, all figures represent amounts as of period end.

CONSOLIDATION GROUP

AS Citadele banka (thereon – the Bank), registration number 40103303559, is the parent company of the Group. In the consolidation group for regulatory purposes (thereon – the Group) companies are included as per requirements of Regulation (EU) No 575/2013, while in the consolidation group for the accounting purposes companies are included in accordance with International Financial Reporting Standards (IFRS) as adopted in the European Union.

EU LI3 – Outline of the differences in the scopes of consolidation (entity by entity)

a	b	c-g	h
Name of the entity	**Method of accounting consolidation**	**Method of regulatory consolidation**	**Description of the entity**
AS Citadele banka	Full consolidation	Full consolidation	Banking
SIA Citadele Leasing	Full consolidation	Full consolidation	Leasing
Kaleido Privatbank AG (Discontinued operations held for sale)	Full consolidation	Full consolidation	Banking
SIA Citadele Factoring	Full consolidation	Full consolidation	Leasing and factoring
IPAS CBL Asset Management	Full consolidation	Full consolidation	Investment management company
UAB Citadele Factoring	Full consolidation	Full consolidation	Leasing and factoring
SIA Hortus Residential	Full consolidation	Full consolidation	Support services
AS CBL Atklātais Pensiju Fonds	Full consolidation	Full consolidation	Pension fund
OU Citadele Factoring	Full consolidation	Full consolidation	Leasing and factoring
SIA Mobilly (Investments in associates accounted for using the equity method)	Equity method	Equity method	Electronic money institution
SIA CL Insurance Broker	Full consolidation	Full consolidation	Support services
AAS CBL Life	Full consolidation	Deducted	Life insurance

There are no immediate or foreseeable legal obstacles for capital element transferability or liability repayment between the Group's parent company and its subsidiaries.

In certain jurisdictions all profits may not be paid out in dividends. In other jurisdictions specific part from accumulated profits has to be set aside for reserves. These reserves are freely available to the respective company for unlimited and immediate use to cover risks or losses, when such are incurred. For certain Group's earnings tax on capital distribution applies. For more details refer to the latest annual report.

EU LIA – Explanations of differences between accounting and regulatory exposure amounts

Legal basis	Row number	Qualitative information
Article 436(b) CRR		The consolidation Group for regulatory purposes is different from the consolidation Group for the accounting purposes. As per regulatory requirements AAS CBL Life, a licensed insurer, is not included in the consolidation Group for capital adequacy purposes. Consequently, it is excluded from own funds calculation and individual assets of AAS CBL Life are not included as risk exposures in the Group's capital adequacy calculation. Instead, the carrying value of the Group's investment in AAS CBL Life constitutes a risk exposure in the Group's capital adequacy ratio calculation. For regulatory purposes for discontinued operations held for sale a look through approach is applied.
Article 436(b) CRR	(a)	The differences between the amounts in columns (a) and (b) in EU LI1 proceed from different consolidation rules in the regulatory and accounting consolidations with regard to AAS CBL Life.
Article 436(d) CRR	(b)	Carrying values under the regulatory scope of consolidation are different to accounting consolidation for items subject to market risk and other specific risks due to differences in regulatory requirements.

EU LI1 – Differences between the accounting scope and the scope of prudential consolidation and mapping of financial statement categories with regulatory risk categories

EU LIB – Other qualitative information on the scope of application

Legal basis	Row number	Qualitative information
Article 436(f) CRR	(a)	Impediment to the prompt transfer of own funds or to the repayment of liabilities within the group: There are no immediate or foreseeable legal obstacles for capital element transferability or liability repayment between the Group's parent company and its subsidiaries. In certain jurisdictions all profits may not be paid out in dividends. In other jurisdictions specific part from accumulated profits has to be set aside for reserves. These reserves are freely available to the respective company for unlimited and immediate use to cover risks or losses, when such are incurred. For certain Group's earnings tax on capital distribution applies. For more details refer to the latest annual report.
Article 436(g) CRR	(b)	Subsidiaries not included in the consolidation with own funds less than required: Subsidiaries, which are not consolidated, comply with own funds and other regulatory requirements based on their standalone ratios.
Article 436(h) CRR	(c)	Use of derogation referred to in Article 7 CRR or individual consolidation method laid down in Article 9 CRR: Nothing to report.
Article 436(g) CRR	(d)	Aggregate amount by which the actual own funds are less than required in all subsidiaries that are not included in the consolidation: Nothing to report.

GOVERNANCE

In order to ensure that the Bank's Supervisory Board and Management Board members and key function holders are suitable for their position and represent diversity, the Bank has developed internal regulation "Policy on the Assessment of the Suitability of Members of the Supervisory Board, Management Board and Key Function Holders".

The policy has been developed in accordance with the Credit Institution Law of the Republic of Latvia and the recommendations of the supervisory authorities. The policy is reviewed and if necessary updated regularly.

The policy prescribes the procedure and the frequency of the assessment of the suitability of members of the Bank's Supervisory Board and Management Board and key function holders, as well as procedure for decision making on the suitability.

The initial suitability assessment is performed when a new member is nominated to the Bank's Supervisory Board or Management Board prior to his/her election or prior to the date of commencement of his/her duties, but not later than within 6 weeks after the election of the member of the Supervisory Board or the Management Board.

The reassessment of suitability is performed in the following cases:

- During the annual assessment of the suitability of a member of the Supervisory Board or the Management Board,
- If a member of the Supervisory Board or the Management Board is re-elected to his/her position,
- If changes are made to the responsibilities of a member of the Supervisory Board or the Management Board or in the competences required to carry out such responsibilities,
- If there is a doubt about the reliability, competence or reputation of a member of the Supervisory Board or the Management Board.

The suitability assessment is performed considering the overall composition of the Supervisory Board and the Management Board, as well as the knowledge and competence collectively necessary for the Supervisory Board and the Management Board, awareness and personal qualities in order to properly carry out the duties assigned to the members of the Supervisory Board in relation to the supervision of the Management Board activities and to the Management Board in relation to the Group's operational management.

The suitability assessment of the members of the Supervisory Board and the Management Board is performed by the Remuneration and Nomination Committee. The Supervisory Board approves the composition and also regulations of this committee. The suitability assessment of key function holders is performed by a special committee. The Management Board approves the composition and also regulations of this committee.

Each member of the Management Board is responsible for a specific scope of the Group operations. The suitability assessment process ensures that members of the Management Board have adequate level of necessary knowledge and competence in relation to specific scope of operations of the Group under responsibility of each member of the Management Board, as well adequate necessary collective knowledge and competence.

For full list of directorships held by the members of Supervisory Board and Management Board please refer to the "Committees" subsection of the "Governance" section of www.cblgroup.com.

EU OVB - Disclosure on governance arrangements

Legal basis	Row number	
Point (a) of Article 435(2) CRR	(a)	The number of directorships held by members of the management body: Information about number of directorships held by members of the management body in Citadele is available in the "Supervisory board committees" section of the Bank's web page.
Point (b) of Article 435(2) CRR	(b)	Information regarding the recruitment policy for the selection of members of the management body and their actual knowledge, skills and expertise: Information regarding the recruitment policy for the selection of members of the management body and their actual knowledge, skills and expertise is available in the "Remuneration report" of Citadele and in the "Corporate governance" section of the Bank's web page.
Point (c) of Article 435(2) CRR	(c)	Information on the diversity policy with regard of the members of the management body: Information on the diversity policy with regard of the members of the management body is available in the "Remuneration report" of Citadele.
Point (d) of Article 435(2) CRR	(d)	Information whether or not the institution has set up a separate risk committee and the frequency of the meetings: Information whether or not the institution has set up a separate risk committee and the frequency of the meetings: Information about whether or not the institution has set up a separate risk committee and the frequency of the meetings are available in the "Statement on corporate governance" of Citadele and in the "Corporate governance" section of the Bank's web page.
Point (e) Article 435(2) CRR	(e)	Description on the information flow on risk to the management body Information is available in the "Statement on corporate governance" of Citadele and in the "Corporate governance" section of the Bank's web page.

RISK MANAGEMENT

The Group considers risk management to be an essential component of its management process. The Group pursues prudent risk management that is aligned with its business ambitions and aims to achieve effective risk mitigation. In order to assess and monitor complex risk exposures, the Group applies a wide range of risk management tools in conjunction with risk committees. Members of the risk committees represent various operations of the Group in order to balance business and risk within the respective risk committees. Annually Group defines its Risk Appetite Framework which sets acceptable risk-taking limits across all relevant risk types, considering business goals, macroeconomic environment and regulatory setting. Risk appetite limits are cascaded to all risk management strategies and implemented operationally through detailed internal regulations.

The Group's risk management principles are set out in its Risk Management Policy. The Group adheres to the following key risk management principles:

- The Group aims to ensure that it maintains low overall risk exposure, diversified asset portfolio, limited risks in financial markets and low levels of operational risk;
- The Group aims to ensure an acceptable risk level in all operations. Risks are always assessed in relation to their expected return. Risk exposures that are not acceptable are avoided, limited or hedged;
- The Group does not assume high or uncontrollable risks irrespective of the return they provide and assumes risks only in economic fields and geographical regions in relation to which it believes it has sufficient knowledge and expertise;
- Risk management is based on each Group's employee's responsibility for the transactions carried out by him/her and awareness of the related risks;
- Risk limit system and strict controls are essential risk management elements. Control over risk levels and compliance with the imposed limits is achieved by the existence of structured risk limit systems for all material risks.

The aim of the risk management in the Group is to facilitate the achievement of the Group's goals, sustainable growth, long-term financial stability and to protect the Group from unidentified risks. The Bank has appointed a Risk Director (CRO) who is a member of the Bank's Management Board and whose responsibilities do not include the duties related to the activities under control. The CRO has a direct access to the Bank's Supervisory Board. The Risk Committee, which is subordinated to the Bank's Supervisory Board, has been established in the Bank. The main task of the Risk Committee is to provide support to the Bank's Supervisory Board in relation to the monitoring of the Group's risk management system. The Risk Committee established by the Bank's Supervisory Board provides recommendations to the Bank's Management Board regarding improvements of the risk management system. Risk management function within the Group is controlled by an independent unit – the Risk Division.

The main risks to which the Group is exposed are: credit risk, market risk, interest rate risk, liquidity risk, currency risk, operational risk and environmental and climate-related risk. For each of these risks the Group has approved risk management policies and other internal regulations defining key risk management principles and processes, functions and responsibilities of units, risk concentration limits, as well as control and reporting system. The Bank's Supervisory Board approves risk management policies and ensures the control of efficiency of the risk management system. The Bank's Management Board and CRO ensure implementation of the risk management policies and development of internal regulations for the management of each material risk within the Group. In order to assess and monitor material and complex risk exposures, the Bank's Management Board establishes risk committees. Members of risk committees represent various units of the Group in order to ensure the balance between the units responsible for risk monitoring and control and the units with business orientation.

The Group continuously assesses and controls risks – both on an individual basis by type of risk and by performing a comprehensive assessment within the internal capital adequacy assessment process (ICAAP). Each member of the Group is responsible for risk control and management. Each employee of the Group is responsible for the compliance with the principles set out in the Group's internal regulations.

Risk management process includes the following elements: risk identification, risk assessment and decision making, risk management and control, risk oversight and reporting. The Group regularly, at least once a year, identifies and describes the types of material risks inherent in its operations by assessing what types of risks may have a negative impact on achieving its performance targets and projected financial results. In order to identify the types of material risks, quantitative and qualitative criteria are used and the results of the process are documented. For all types of identified material risks the aims of risk management are defined and risk appetite is determined. In addition, the development of internal regulations in relation to risk management of those risks is ensured, including risk identification and assessment methods, adequate risk restriction and control procedures, such as quantitative restrictions and limits, or control measures that reduce unquantifiable risks, risk appetite, procedures for reporting the information on risks, risk levels assumed and trends thereof to the Group's management bodies, as well as other information necessary for decision making, risk management policy and control procedures, including procedures for control of compliance with the restrictions and limits set, segregation of duties, approval rights and responsibilities. A robust risk management system has a profound impact on entire operations, empowering the Group to make informed decisions regarding risk, return, and market conditions.

Risk assessment and decision making include selection, approval and documentation of risk assessment methodology, regular risk assessment, establishment of the risk restriction and controlling system and setting the acceptable level of risks within this system, decision making on assuming the risks. Risk assessment includes the determination of qualitative and quantitative impact of the source of each identified risk using generally accepted methodology, which is adequately documented. The Group makes a decision in relation to each identified and assessed risk on whether the Group accepts such risk or takes the necessary measures for its mitigation, or ceases activities related to this risk. The Group does not assume risks with the impact exceeding the risk appetite determined for each respective type of risk regardless of the economic benefits that might result from assuming such risk.

Risk management and control include the compliance with the level of risk acceptable for the Group including the compliance with the limits restricting the amount of risk. Monitoring and reporting include regular assessment of the existing level of risk against the desirable level of risk, trend analysis, regular reporting to the relevant unit heads, the Bank's Management Board and the Supervisory Board. The integral part of the risk management is risk stress testing. Stress testing process ensures regular identification and assessment of risks inherent to the Group's current and future operations, as well as assessment of the impact of different extraordinary and adverse events on the Group's operations, in order to provide support to responsible employees of the Group in management decision-making process at different levels of management (e.g., strategic planning, determination and correction of the risk appetite, capital planning, liquidity management).

The Group's Internal Audit Division regularly monitors the implementation of risk management policies and other internal regulations, as well as provides recommendations regarding improvements of the risk management system.

MAIN REGULATORY RATIOS WITH INCLUSION OF THE FULL PERIOD PROFITS

Throughout the report as of 31 December 2023 is presented a scenario, where interim profits only up to the most recent regulatory approved amount are included. 2023 audited profits will become eligible for inclusion in the regulatory capital after the institution will take a formal decision confirming the final profit or loss for the year.

The consolidated Group for regulatory purposes is different from the consolidated Group for accounting purposes. As per regulatory requirements AAS CBL Life, a licensed insurer, is not included in the consolidated Group for capital adequacy purposes. Thus, net profit for the regulatory Group excludes net result of AAS CBL Life versus net result for the accounting Group. Consequently, net result of AAS CBL Life is excluded from own funds calculation and individual assets of AAS CBL Life are not included as risk exposures in the Group's capital adequacy calculation. Instead, the carrying value of the Group's investment in AAS CBL Life constitutes a risk exposure in the Group's capital adequacy ratio calculation.

Key regulatory ratios scenario, if full 12m2023 profit for the year, less EUR 50.6 million deduction for total estimated annual was included

Total required stable funding	2,507,341	2,844,055
Net stable funding ratio	**147%**	**132%**

CAPITAL ADEQUACY CALCULATION

Capital adequacy is calculated in accordance with the current global standards of the bank capital adequacy (the Basel III international regulatory framework) as implemented by the European Union via a regulation (EU) 575/2013 and a directive 2013/36/EU, rules and recommendations issued by supervisory authorities and other relevant regulations.

Capital adequacy is a measure of sufficiency of the Group's eligible capital resources to cover credit risks, market risks, operational risk and other specific risks arising predominantly from asset and off-balance sheet exposures of the Group. The regulations require credit institutions to maintain a Total Capital adequacy ratio of 8.0% of the total risk weighted exposure amounts. The rules also require 4.5% minimum Common Equity Tier 1 capital ratio and 6.0% minimum Tier 1 capital ratio.

Total SREP capital requirement (TSCR) requires capital to cover risks in addition to these covered by the regulation (EU) 575/2013. TSCR is established in a supervisory review and evaluation process (SREP) carried out by the supervisory authority. The supervisory authority determines TSCR on a risk-by-risk basis, using supervisory judgement, the outcome of supervisory benchmarking, ICAAP calculations and other relevant inputs. The additional pillar 2 capital requirement is re-assessed annually by the supervisory authority. As of the period end based on the assessment of the supervisory authority an additional 2.50% own funds requirement is determined to cover Pillar 2 risks. Thus, as of the period end Citadele shall at all times meet, on a consolidated basis, a total SREP capital requirement (TSCR) of 10.5% (which includes a Pillar 2 additional own funds requirement of 2.5% to be held in the form of 56.25% of Common Equity Tier 1 (CET1) capital and 75% of Tier 1 capital, as a minimum).

On top of the minimum capital adequacy ratios and the Pillar 2 additional capital requirements (TSCR), the Group and the Bank must comply with the capital buffer requirements. The buffer requirements must be reached by Common Equity Tier 1 capital. The capital conservation buffer both for the Group and the Bank is set at 2.50%, limiting dividend pay-out and certain other Tier 1 equity instrument buybacks, if the buffer threshold is breached.

Countercyclical capital buffer norms at each balance sheet date are calculated based on the actual risk exposure geographical distribution and the countercyclical buffer rates applicable for each geographical location. Increases in countercyclical capital buffer norms, when announced by the respective county, become effective after prespecified delay. Decreases take effect immediately.

The systemic risk buffer (SyRB) aims to address systemic risks that are not covered by the Capital Requirements Regulation or by the CCyB or the O-SII buffers. The level of the SyRB may vary across institutions or sets of institutions as well as across subsets of exposures.

Citadele, being identified as “other systemically important institution” (O-SII), as of period end must also comply with the O-SII capital buffer requirement set by the supervisory authority at 1.75%.

The Pillar 2 Guidance (P2G) is a bank-specific recommendation that indicates the level of capital that the supervisory authority expects banks to maintain in addition to their binding capital requirements. It serves as a buffer for banks to withstand stress. The Pillar 2 Guidance is determined as part of the Supervisory Review and Evaluation Process (SREP) and for Citadele as of period end is set at 1.5%. Unlike the Pillar 2 Requirement, the Pillar 2 Guidance is not legally binding.

The Group and the Bank applies requirements of minimum loss coverage for non-performing exposures in line with regulation (EU) 2019/630. The minimum loss coverage calculation is mathematically simplistic “calendar based” calculation for non-performing exposures, which is constructed on the principle – the longer an exposure has been non-performing, the lower the probability for the recovery of its value. Therefore, the portion of the exposure that should be covered by provisions, impairments, other adjustments or deductions should increase with time, following a pre-defined calendar. Insufficient coverage for non-performing exposures is deductible from the regulatory capital. Due to the Group's provisioning policy and portfolio structure, the regulation of minimum loss coverage for non-performing exposures has had minor impact on the Group's capital adequacy position.

The Bank has to comply with the regulatory requirements both at the Bank's standalone level and at the Group's consolidated level. As of the period end both the Bank and the Group have sufficient capital to comply with the capital adequacy requirements. The long-term regulatory capital position of the Group and the Bank is planned and managed in line with these and other expected upcoming regulatory requirements.

Regulatory capital requirements of the Group on 31 December 2023

	Common equity Tier 1 capital ratio	Tier 1 capital ratio	Total capital adequacy ratio
Common equity Tier 1 ratio	4.50%	4.50%	4.50%
Additional Tier 1 ratio	-	1.50%	1.50%
Additional total capital ratio	-	-	2.00%
Pillar 2 additional own funds requirement (individually determined by the supervisory authority in the SREP, P2R)	1.41%	1.88%	2.50%
Capital buffer requirements:			
Capital conservation buffer	2.50%	2.50%	2.50%
O-SII capital buffer	1.75%	1.75%	1.75%
Systemic risk buffer	0.07%	0.07%	0.07%
Countercyclical capital buffer	0.60%	0.60%	0.60%
Capital requirement	**10.83%**	**12.80%**	**15.42%**
Pillar 2 Guidance (P2G)	1.50%	1.50%	1.50%
Non-legally binding capital requirement with Pillar 2 Guidance	**12.33%**	**14.30%**	**16.92%**

Capital adequacy ratio (including only the part of interim profits up to the latest regulatory approved amount)

Per regulations, Bank may include interim or year-end profits in capital before taking a formal decision confirming the final audited profit for the year only with a prior permission of the competent authority. Any foreseeable charges or dividends must be deducted from those profits. Submission of documents for permission takes time and such permission is requested only after the publishing of the financial report for the respective period. The most resent permission of the competent authority for inclusion of the interim auditors verified profits, which have been decreased by foreseeable charges and dividends, has been received for nine months period end 30 September 2023. Throughout the report and below is presented a scenario, where interim profits only up to the most recent regulatory approved amount are included. 2023 audited profits will become eligible for inclusion in the regulatory capital after the institution will take a formal decision confirming the final profit or loss for the year.

CREDIT RISK AND CREDIT RISK MITIGATION (CRM)

Credit risk is the risk that the Group will incur a loss from debtor's non-performance or default. The Group is exposed to credit risk in its lending, investing and transaction activities, as well as in respect of the guarantees issued to or received from third parties and other off-balance sheet commitments to third parties. Credit risk management is performed pursuant to the Credit Risk Management Policy, Risk strategy and Loan monitoring, Forbearance and NPL management policy. The goal of the credit risk management is to ensure a sound, sustainable and diversified loan and securities portfolios, which generates returns that correspond to the assumed level of risk and are characterized by high resilience against external shocks.

Credit risk management is based on an adequate assessment of credit risk, proper decision-making and monitoring. The lending decision is based on repayment capacity of the borrower and an additional alternative recovery option in case of default or material deterioration of the borrower's risk profile.

In cases when significant risk is to be undertaken, the credit risk analysis is performed by units independent from loan origination. The credit risk analysis consists of risk identification, PD calculation, an assessment of customer's creditworthiness and collateral quality and liquidity. The analysis of a legal entity's creditworthiness includes risk identification and an assessment of the shareholder structure and management, industry and peers, business model and project financed as well as an analysis of its credit history and current and forecasted financial situation and its sensitivity to key risk drivers and analysis of the ESG factors. The assessment of a private individual's creditworthiness consists of the credit history and affordability analysis. For significant exposures decision on loan origination is taken by the Credit Committee and approved by the Bank's Management Board.

In relation to the acquisition of corporate bonds, the Group always analyses the business profile and financial performance of the issuer, taking into consideration the credit ratings assigned to it by international rating agencies or performs internal counterparty financial analysis, if external rating is not assigned, as well as market-based indicators. Sovereign bonds are assessed similarly, but with an emphasis on different fundamental factors, including the country's economic strength, institutional strength, financial strength of the government, political risks and other relevant factors.

After a loan is issued, the borrower's financial position, early warning indicators, payment discipline and client's ability to meet contractual obligations are being regularly evaluated and monitored to timely identify credit quality deterioration and apply appropriate classification.

The Group monitors its loan portfolio and securities portfolio, regularly assesses its structure, quality, concentration levels, portfolio performance trends and overall risk level. The Group takes measures for limiting credit risk concentration by diversifying the portfolio and setting credit risk concentration limits. To limit its credit risk, the Group has set the following concentration limits: individual counterparty and issuer limits, maximum exposure limit linked to a particular risk class of counterparty/issuer, limit for internally risk weighted exposures in a particular country/sector combination, limit for groups of mutually related customers, limit for large risk exposures, limit for transactions with the Group's related parties, industry limits. Credit risk identification, monitoring and reporting is the responsibility of the Risk Division.

In addition to the credit risk, which is inherent in the Group's loan portfolio and fixed income securities portfolio, the Group is also exposed to credit risk as a result of its banking relationships with multiple credit institutions which it maintains in order to process customer transactions in a prompt and efficient manner. The Group manages its exposure to commercial banks and brokerage companies by monitoring on a regular basis the credit ratings of such institutions, conducting due diligence of their credit profiles and monitoring the individual exposure limits applicable to counterparties set by the Financial Market and Counterparty Risk Committee (FMCRC). The Group's exposures to derivative counterparties arise from its activities in managing foreign exchange risk. Risk appetite for the open foreign exchange position is low, and the Group executes counterparty risk assessment and accepts only counterparties which are within its risk appetite limits.

EU CRA: General qualitative information about credit risk

Qualitative disclosures	
(a)	In the concise risk statement in accordance with point (f) of Article 435(1) CRR, how the business model translates into the components of the institution's credit risk profile.
	See text above
(b)	When discussing their strategies and processes to manage credit risk and the policies for hedging and mitigating that risk in accordance with points (a) and (d) of Article 435(1) CRR, the criteria and approach used for defining the credit risk management policy and for setting credit risk limits.
	See text above
(c)	When informing on the structure and organisation of the risk management function in accordance with point (b) of Article 435(1) CRR, the structure and organisation of the credit risk management and control function.
	See text above
(d)	When informing on the authority, status and other arrangements for the risk management function in accordance with point (b) of Article 435(1) CRR, the relationships between credit risk management, risk control, compliance and internal audit functions.
	See text above

EU CRB: Additional disclosure related to the credit quality of assets

Qualitative disclosures	
(a)	The scope and definitions of 'past-due' and 'impaired' exposures used for accounting purposes and the differences, if any, between the definitions of past due and default for accounting and regulatory purposes as specified by the EBA Guidelines on the application of the definition of default in accordance with Article 178 CRR.
	The scope and definitions of 'past-due' and 'impaired' exposures used for accounting purposes and the definitions of past due and default for regulatory purposes are as specified by the EBA Guidelines on the application of the definition of default.
(b)	The extent of past-due exposures (more than 90 days) that are not considered to be impaired and the reasons for this.
	All exposures past-due more than 90 days are considered past-due exposures and are considered credit impaired for accounting purposes. All financial assets are assessed for expected credit losses.
(c)	Description of methods used for determining general and specific credit risk adjustments.
	By default all exposures are assessed collectively for expected credit losses, and the corresponding impairment allowances or provisions for off-balance sheet exposures are presented as general credit risk adjustments. For larger loan book exposures, where there are indications of impairment, an individual expected credit loss assessment is carried out and, if based on the assessment, the exposure is impaired the resulting impairments allowance and provisions are presented as specific credit risk adjustment. For large exposures, which have no impairment indicators or where based on the individual assessment are not impaired, expected credit losses are assessed collectively and presented as general credit risk adjustments.
(d)	The institution's own definition of a restructured exposure used for the implementation of point (d) of Article 178(3) CRR specified by the EBA Guidelines on defaultin accordance with Article 178 CRR when different from the definition of forborne exposure defined in Annex V to Commission Implementing Regulation (EU) 680/2014.
	The institution is applying definition of a restructured exposure for the implementation of Article 178(3)(d) as specified by the EBA Guidelines on default in the definition of forborne exposure defined in Annex V of the Commission Implementing Regulation (EU) No 680/2014.

EU CRC – Qualitative disclosure requirements related to CRM techniques

Article 453 (a) CRR	(a)	Netting is not used as a CRM technique both for on-balance sheet and off-balance sheet exposures.
Article 453 (b) CRR	(b)	The valuation of the government guarantees and cash security deposits is the guaranteed amount as there is no volatility of mark-to-market adjustments to these types of CRM items.
Article 453 (c) CRR	(c)	The only types of collateral considered for CRM are government or state-owned development finance institution guarantees, guarantees provided by institutions and cash security deposits placed with the institution.
Article 453 (d) CRR	(d)	Prudently no credit derivatives are considered for the purposes of reducing capital requirements.
Article 453 (e) CRR	(e)	There is no CRM concentration risk from non-governmental counterparties.

EU CR3 – CRM techniques overview: Disclosure of the use of credit risk mitigation techniques

		Unsecured carrying amount	Secured carrying amount	Of which secured by collateral	Of which secured by financial guarantees	Of which secured by credit derivatives
		a	b	c	d	e

5	*Of which defaulted*	*1,086*	*30,979*	*29,968*	*1,011*	-

EU CRD – Qualitative disclosure requirements related to standardised approach

Article 444(a)	Credit ratings issued by Moody's, Standard & Poor's, and Fitch Ratings are used by the institution. No ratings issued by other external credit assessment institutions (ECAIs) are used.
Article 444(b)	For all eligible exposure classes eligible ECAI ratings are used.
Article 444(c)	No credit rating issued for one asset is transferred onto comparable assets in the banking book.
Article 444(d)	The alphanumerical scale of each agency is aligned with the credit quality steps prescribed in Part Three, Title II, Chapter 2 of the CRR (as specified by the EBA).

In accordance with the EC 1152/2014 foreign exposures, whose aggregate does not exceed 2% of the aggregate of the general credit, trading book and securitisation exposures of that institution are allocated to an institution's home member state. The Article 140.4 of the 2013/36/EU requires only relevant credit exposures of the institution to be included in the countercyclical capital buffer calculating.

EU CCyB2 - Amount of institution-specific countercyclical capital buffer

		a
1	Total risk exposure amount	2,313,612
2	Institution specific countercyclical capital buffer rate	0.6%
3	Institution specific countercyclical capital buffer requirement	13,844

COUNTERPARTY CREDIT RISK

Counterparty credit risk is the risk that the counterparty to a transaction could default before the final settlement of the transaction's cash flows. Group's counterparty credit risk arises primarily from currency derivatives transactions. The Group applies Simplified Standardised Approach (Simplified SA CCR) to calculate counterparty credit risk.

EU CCRA – Qualitative disclosure related to CCR

(a)	Article 439 (a) CRR	Description of the methodology used to assign internal capital and credit limits for counterparty credit exposures, including the methods to assign those limits to exposures to central counterparties The methodology involves assessing the credit risk associated with each counterparty, incorporating evaluation factors such as their credit rating, financial health, industry, and other relevant qualitative and quantitative metrics. Exposure to a particular counterparty is constrained by individual limits approved by the Financial Markets and Counterparty Risks Committee and the Management Board. Concentration risk for counterparties is limited by the Group's risk strategy based on internal risk classes. These classes are assigned to each counterparty primarily based on its credit rating. However, a lower internal risk class may be assigned if additional factors, identified through creditworthiness analysis, are deemed as triggers for the counterparty's health.
(b)	Article 439 (b) CRR	Description of policies related to guarantees and other credit risk mitigants, such as the policies for securing collateral and establishing credit reserves Citadele only engages in exchanges with initial and variation margins under the Credit Support Annex (CSA).
(c)	Article 439 (c) CRR	Description of policies with respect to Wrong-Way risk as defined in Article 291 of the CRR Citadele regularly monitors counterparties' credit ratings and changes, with reports submitted to the Financial Markets and Counterparty Risks Committee. If necessary, internal risk classes and limits are revised to mitigate potential increases in exposures.
(d)	Article 431 (3) and (4) CRR	Any other risk management objectives and relevant policies related to CCR Citadele conducts reviews of the creditworthiness of counterparties and discusses them in the Financial Markets and Counterparty Risks Committee. Adjustments to counterparty internal risk class and limits are made as necessary.
(e)	Article 439 (d) CRR	The amount of collateral the institution would have to provide if its credit rating was downgraded Citadele does not have such obligations in the event of a credit rating downgrade.

Credit Valuation Adjustment is an adjustment to the mid-market valuation of the portfolio of transactions with a counterparty. That adjustment reflects the current market value of the credit risk of the counterparty to the institution in relation to transactions with derivatives.

SECURITISATION

EU-SECA - Qualitative disclosure requirements related to securitisation exposures

Legal basis	Row number	Qualitative information
Article 449(a) CRR	(a)	Description of securitisation and re-securitisation activities; including institutions' risk management and investment objectives in connection with those activities, their role in securitisation and re-securitisation transactions whether they use the Simple Transparent and Standardised (STS) securitisation framework and the extent to which they use securitisation transactions to transfer the credit risk of the securitised exposures to third parties with, where applicable, a separate description of their synthetic securitisation risk transfer policy
		Citadele is participating in a Private Synthetic Securitisation, non-STS (Simple Transparent and Standardised). Therefore, STS securitisation framework is not applied. The total risk retained is calculated form the overcollateralized underlying loan portfolio. The collateralised loan portfolio is not derecognised for accounting purposes and is reported as loans. For more details refer to the summary of the Group's key accounting policies in the most recent annual report.
Article 449(b) CRR	(b)	The type of risk that institutions are exposed to in their securitisation and re-securitisation activities by level of seniority of the relevant securitisation positions, providing a distinction between STS and non-STS positions and: i) risk retained in own-originated transactions; ii) risk incurred in relation to transactions originated by third parties
		Citadele has only own-originated securitisation transaction. Citadele is not participating in securitisation transactions originated by third parties.
		Risk of Citadele is limited to the first loss tranche and to the excess spread. STS securitisation framework is not applied. Loss amount exceeding expected credit losses on the securitized exposures is subject to 1250% risk weight or deduction from Equity (Articles 244 (1) (b) or 245 (1) (b) of CRR). Citadele has elected deduction from Equity.
Article 449(c) CRR	(c)	Institutions' approaches to calculating the risk-weighted exposure amounts that they apply to their securitisation activities, including the types of securitisation positions to which each approach applies with a distinction between STS and non-STS positions
		Citadele is not participating in securitisation transactions originated by third parties.
		Citadele has only own-originated synthetic securitisation transaction where risk amount retained is deduct in accordance with Article 245 (1) (b) of CRR. All relates to non-STS.
Article 449(d) CRR	(d)	A list of SSPEs falling into any of the following categories, with a description of types of institution's exposures to those SSPEs, including derivatives contracts: (i) SSPEs which acquire exposures originated by the institutions; (ii) SSPEs sponsored by the institutions; (iii) SSPEs and other legal entities for which the institutions provide securitisation-related services, such as advisory, asset servicing or management services; (iv) SSPEs included in the institutions' regulatory scope of consolidation
		Citadele has no exposures to any of the SSPEs above.
Article 449(e) CRR	(e)	A list of any legal entities in relation to which the institutions have disclosed that they have provided support in accordance with Chapter 5 of Title II of Part Three CRR
		None to be reported.
Article 449(f) CRR	(f)	A list of legal entities affiliated with the institutions and that invest in securitisations originated by the institutions or in securitisation positions issued by SSPEs sponsored by the institutions
		None to be reported.
Article 449(g) CRR	(g)	A summary of their accounting policies for securitisation activity, including where relevant a distinction between securitisation and re-securitisation positions.
		Citadele is not participating in securitisation transactions originated by third parties. For accounting policy on own-originated securitisation transaction refer to the summary of the Group's key accounting policies in the most recent annual report.
Article 449(h) CRR	(h)	The names of the ECAIs used for securitisations and the types of exposure for which each agency is used.
		None. Citadele is not participating in securitisation as an investor.
Article 449(i) CRR	(i)	Where applicable, a description of the Internal Assessment Approach as set out in Chapter 5 of Title II of Part Three CRR including the structure of the internal assessment process and the relation between internal assessment and external ratings of the relevant ECAI disclosed in accordance with point (h), the control mechanisms for the internal assessment process including discussion of independence, accountability, and internal assessment process review, the exposure types to which the internal assessment process is applied and the stress factors used for determining credit enhancement levels.
		None. Citadele is not participating in securitisation as an investor.

EU AE4 - Accompanying narrative information

Qualitative disclosures

(a) General narrative information on asset encumbrance
Refer to the latest annual report.

(b) Narrative information on the impact of the business model on assets encumbrance and the importance of encumbrance to the institution's business model, which provides users with the context of the disclosures required in Template EU AE1 and EU AE2.
Refer to the latest annual report.

LEVERAGE RATIO

Leverage ratio is calculated as Tier 1 capital versus the total exposure measure. As of period end Citadel is not applying transitional provisions. The minimum requirement is 3%. The exposure measure includes both non-risk based on-balance sheet and off-balance sheet items calculated in accordance with the capital requirements regulation. The leverage ratio and the risk-based capital adequacy ratio requirements are complementary, with the leverage ratio defining the minimum capital to total exposure requirement and the risk-based capital adequacy ratios limiting bank risk-taking.

EU LR2 - LRCom: Leverage ratio common disclosure

EU LRA: Disclosure of LR qualitative information

1	Description of the processes used to manage the risk of excessive leverage: The Group regularly calculates leverage ratio and monitors changes in it, to manage risk of excessive leverage.
2	Description of the factors that had an impact on the leverage ratio during the period to which the disclosed leverage ratio refers: The major factors affecting the Group's leverage ratio in the reporting period was change in the Tier 1 capital level due to inclusion in own funds of the audited annual net result as well as changes in the Group's total assets which was related to scale of the Group's operations.

MARKET RISK

Market risk is the risk that the Group will incur a loss as a result of the mark-to-market revaluation of balance sheet and off-balance sheet items caused by changes in market values of financial instruments due to changes in foreign exchange rates, interest rates and other factors.

The position risk of financial instruments is managed through diversification by country, sector, industry and elaborate limit control. Issuers are internally risk graded. The exposure level limits, after in depth analysis, are set by the FMCRC, observing concentration risk levels set in the Group's Risk Strategy and other rules set by and specified in the Risk Strategy. The Bank's Management Board authorizes the decisions of the FMCRC.

To assess position risk the Group uses sensitivity and scenario analysis, which identifies and quantifies the negative impact of adverse events on the portfolio of the Group taking into consideration regional, sector profiles of the portfolio and credit rating risk profiles of issuers.

Group Treasury manages market risk applying the measures set by the Group's Risk Strategy, including through interest rate swaps, which are used for risk management purposes only.

EU MRA: Qualitative disclosure requirements related to market risk

(a)	Points (a) and (d) of Article 435 (1) CRR A description of the institution's strategies and processes to manage market risk, including: - An explanation of management's strategic objectives in undertaking trading activities, as well as the processes implemented to identify, measure, monitor and control the institution's market risks - A description of their policies for hedging and mitigating risk and strategies and processes for monitoring the continuing effectiveness of hedges See text above
(b)	Point (b) of Article 435 (1) CRR A description of the structure and organisation of the market risk management function, including a description of the market risk governance structure established to implement the strategies and processes of the institution discussed in row (a) above, and that describes the relationships and the communication mechanisms between the different parties involved in market risk management. See text above
(c)	Point (c) of Article 435 (1) CRR Scope and nature of risk reporting and measurement systems See text above

Exposures in equities not included in the trading book

None of the Group's investments in equity exposures has trading intention. Information on the Group's investments in the equities, which are not held for trading, including carrying value, applied valuation techniques, fair value hierarchy level and estimated fair value, is disclosed at AS Citadele banka latest financial report which is available at www.cblgroup.com.

The prudential consolidation group does not include AAS CBL Life. The Group's investment of EUR 4,269 thousand in the capital of this subsidiary is accounted at cost and is not revalued.

Currency risk

Currency risk is a risk of loss arising from fluctuations in currency exchange rates.

Currency risk management in the Group is carried out in accordance with Market Risk and Counterparty Credit Risk Management Policy and limits set in the Group's Risk Appetite Framework and Risk Strategy. FMCRC oversees and assess currency risk level within the Group, monitors compliance and the fulfilment of the limits, and sets limits for individual dealing desks within the overall risk limits. The Bank's Management Board authorizes the decisions of the FMCRC.

Day-to-day currency risk management is the responsibility of the Treasury Division, while risk monitoring and reporting is the responsibility of the Risk Management Division.

The Group has a low-risk appetite for foreign exchange risk. The Group aims to keep exposures at levels that would produce a small net impact even in periods of high volatility. Several well-known methodologies are used to measure and manage foreign exchange risk including a conservative limit for a daily value-at-risk exposure. The Group is in full compliance with the currency position requirements of Latvian legislation and sets its internal limits more prudently than the regulatory limits.

Interest rate risk

Interest rate risk is related to the possible negative impact of changes in general interest rates on the Group's income and economic value.

Interest rate risk management in the Group is carried out in accordance with Market Risk and Counterparty Credit Risk Management Policy

Interest rate risk is assessed, and decisions are taken by the Assets and Liabilities Management Committee (ALCO). The decisions of the ALCO are approved by the Bank's Management Board. Acceptable interest rate risk level accompanied with the relevant limits is defined in the Group's Risk appetite framework and Risk strategy, ALCO monitors the compliance with the approved limits and use of the instruments for the management of interest rate risk. Interest rate risk measurement, management and reporting are responsibilities of the Treasury Division, while the Risk Management Division ensures proper oversight and prepares analytical reports to the ALCO and the Bank's Management Board.

The Group manages interest rate risk by using repricing gap analysis of the risk sensitive assets and liabilities, duration analysis of assets and liabilities as well as stress testing. Group sets limits for the impact of interest rate shock on economic value, net interest income and revaluation reserve. Based on the market analysis and the Group's financing structure, the ALCO sets the interest rates for customer deposits.

EU IRRBBA - Qualitative information on interest rate risks of non-trading book activities

Row number	Qualitative information		Legal basis
(a)	A description of how the institution defines IRRBB for purposes of risk control and measurement	Prospective adverse impact on the Bank's and Group's net interest income and capital arising from a change in interest rates. IRRBB is measured throughout the stress testing outcomes and gap analysis. IRRBB risk control is ensured by the Risk Division	Article 448(1), point (e)
(b)	A description of the institution's overall IRRBB management and mitigation strategies	IRRBB management is ensured through the compliance with risk limits set according to Group's risk appetite approved by the Supervisory Board. The ALCO and the Management Board is responsible to take decision on necessary risk mitigation actions depending on limit breach specific, future Group's plans and strategy, market conditions, counterparty pricing etc. The Treasury Division is responsible for executing ALCO and Management Board decisions	Article 448(1), point (f)
(c)	The periodicity of the calculation of the institution's IRRBB measures, and a description of the specific measures that the institution uses to gauge its sensitivity to IRRBB	Interest rate risk sensitive assets/liabilities gap analysis and IRRBB stress testing is ensured on a weekly basis	Article 448(1), points (e) (i) and (v); Article 448(2)
(d)	A description of the interest rate shock and stress scenarios that the institution uses to estimate changes in the economic value and in net interest income (if applicable)	n/a	Article 448(1), point (e) (iii); Article 448(2)

LIQUIDITY RISK

Liquidity risk is the risk that the Group will be unable to meet its legal payment obligations. The purpose of liquidity risk management is to ensure the availability of liquid assets to cover any possible gaps between cash inflows and outflows as well as to secure sufficient funding for lending and investment activities.

The Group manages its liquidity risk in accordance with Liquidity Risk Management Policy and Liquidity Buffer Management Policy. The management and reporting of liquidity risk is coordinated by the Treasury Division, and the risk is assessed and decisions are taken by the ALCO. The decisions of the ALCO are approved by the Bank's Management Board. The Risk Management Division on a monthly basis provides information to the ALCO and the Bank's Management Board and Supervisory Board about the level of the assumed risk as part of the reporting and supervision process.

Liquidity risk for the Group is assessed in each currency in which the Group has a significant amount of transactions. Liquidity risk limits are reviewed at least once a year and also when there are major changes to the Group's operations or external factors affecting its operations. A liquidity crisis management plan has been developed and is updated on a regular basis.

One of the crucial tools used to evaluate liquidity risk is scenario analysis. Several scenarios of different severity and duration are employed by the Group with risk tolerances defined for the outcomes of those scenarios. Furthermore, the Group has developed a system of liquidity risk limits and early warning indicators and systematically prepares cash flow forecasts which incorporate assumptions about the most likely flow of funds over the period of one year. For general assessment of existing gaps between contractual maturities of assets and liabilities without any assumptions on customer behaviour, the Group regularly analyses liquidity term structure and sets corresponding risk tolerances.

The Group's balance sheet structure is planned for at least a one-year period and is aligned with development plans for the current period. The major current and potential funding sources are regularly analysed and controlled across the Group. The Group maintains regular contact with its interbank business partners and creditors with the aim of projecting possible deadlines for repayment or prolongation of funding sources as well as absorption of excess liquidity.

The general principles of the liquidity coverage ratio (LCR) as measurements of the Bank's and the Group's liquidity position is defined in the Regulation (EC) No 575/2013. The Commission Delegated Regulation (EU) 2015/61 defines general LCR calculation principles in more details. The minimum LCR requirement is 100% and it represents the amount of liquidity available to cover calculated net future liquidity outflows. The Bank and the Group is compliant with LCR requirements.

EU LIQA - Liquidity risk management

Qualitative disclosures

(a) Strategies and processes in the management of the liquidity risk, including policies on diversification in the sources and tenor of planned funding.
See text above and the latest annual report of the Group.

(b) Structure and organisation of the liquidity risk management function (authority, statute, other arrangements).
See text above and the latest annual report of the Group.

(c) A description of the degree of centralisation of liquidity management and interaction between the group's units
See text above and the latest annual report of the Group.

(d) Scope and nature of liquidity risk reporting and measurement systems.
See text above and the latest annual report of the Group.

(e) Policies for hedging and mitigating the liquidity risk and strategies and processes for monitoring the continuing effectiveness of hedges and mitigants.
See text above and the latest annual report of the Group.

(f) An outline of the bank`s contingency funding plans.
See text above and the latest annual report of the Group.

(g) An explanation of how stress testing is used.
See text above and the latest annual report of the Group.

(h) A declaration approved by the management body on the adequacy of liquidity risk management arrangements of the institution providing assurance that the liquidity risk management systems put in place are adequate with regard to the institution's profile and strategy.
See text above and the latest annual report of the Group.

(i) A concise liquidity risk statement approved by the management body succinctly describing the institution's overall liquidity risk profile associated with the business strategy. This statement shall include key ratios and figures (other than those already covered in the EU LIQ1 template under this ITS) providing external stakeholders with a comprehensive view of the institution's management of liquidity risk, including how the liquidity risk profile of the institution interacts with the risk tolerance set by the management body.
These ratios may include:
· Concentration limits on collateral pools and sources of funding (both products and counterparties)
· Customised measurement tools or metrics that assess the structure of the bank's balance sheet or that project cash flows and future liquidity positions, taking into account off-balance sheet risks which are specific to that bank
· Liquidity exposures and funding needs at the level of individual legal entities, foreign branches and subsidiaries, taking into account legal, regulatory and operational limitations on the transferability of liquidity
· Balance sheet and off-balance sheet items broken down into maturity buckets and the resultant liquidity gaps
See text above and the latest annual report of the Group.

EU LIQ1 - Quantitative information of LCR

In template "EU LIQ1" the disclosed LCR information is calculated as the simple average of months-end observations over the twelve months preceding the end of each quarter. In other LCR disclosures and reports non-average end of the month figures may be disclosed. Non-average and end of the month figures will not reconcile.

EU LIQB on qualitative information on LCR, which complements template EU LIQ1

Qualitative information

(a) Explanations on the main drivers of LCR results and the evolution of the contribution of inputs to the LCR's calculation over time:
The LCR is affected by depositors' activities – that is inflows and outflows of funds for operational or economic reasons, and corresponding changes in the HQLA.

(b) Explanations on the changes in the LCR over time:
LCR dynamics are mainly affected by developments in the deposit base and corresponding actions taken by the management to manage liquidity position accordingly.

(c) Explanations on the actual concentration of funding sources:
The Group is primarily deposit funded. Deposits are diversified among Retail and Corporate segments.

(d) High-level description of the composition of the institution`s liquidity buffer:
Mainly comprised of central bank balances and high-quality debt securities.

(e) Derivative exposures and potential collateral calls:
Derivatives are mainly used for management of the open currency position. Collateral pledged and received can be volatile over time and depends on the underlying risk factor dynamics, mainly FX rates, but for the Group is immaterial in absolute terms due to short maturity and low gross volumes.

(f) Currency mismatch in the LCR:
The Group predominantly operates in EUR currency and has low levels of assets and liabilities in foreign currencies. Low currency mismatch in LCR is observed.

(g) Other items in the LCR calculation that are not captured in the LCR disclosure template but that the institution considers relevant for its liquidity profile:
n/a

OPERATIONAL RISK

The Group has adopted the Basel Committee on Banking Supervision's definition of operational risk: the probability of incurring losses due to failure or partial failure of internal processes to comply with the requirements of the laws and binding external regulations, as well as the requirements of internal regulations, due to the acts of the Group's employees and operation of systems, irregularities in internal processes, as well as due to the acts of third parties or other external conditions. Operational risk is divided into the following categories: personnel risk, process risk, IT and system risk, external risk.

Operational risk is managed using an integrated and comprehensive framework of policies, methodologies, procedures and regulations for identification, analysis, mitigation, control, and reporting of operational risk. The Group's operational risk management processes are integral to all business activities and are applicable to all employees and members of the Group. The Group's aim is to ensure that each of its employees knows not just how to perform specific transactions, but also understand the key areas where risk can arise and the processes and steps required to prevent, or otherwise mitigate such risk.

The goal of the Group's operational risk management framework is to maintain low level of risk while ensuring that any residual risk is economically justified in light of the need to sustain the Group's performance and profit in the long term.

The Group aims to avoid operational risks with a potential impact which exceeds 1 bp of CET1 capital and has a higher probability of occurrence than once per five years, or risks with unquantifiable impact which are unmanageable, irrespective of the financial gains this could bring. Each accepted risk must be economically justified and, in cases where the assessment of operational risk in monetary terms is possible, the costs of the control measures required must be commensurate with the eventual loss that could be prevented by the existence of the control system.

The Group applies following approaches for operational risk management:

- Assessing operational risk in development projects: new and updated services and products are introduced only after a thorough risk assessment has been carried out;
- Conducting regular operational risk-control self-assessment: the Group identifies and assesses potential operational risk events, assesses control systems which are in place, and analyses the necessary risk reduction measures;
- Measuring operational risk indicators: the Group uses statistical, financial, and other indicators which represent the levels of operational risk in its various activities;
- Measuring, analysing, monitoring, reporting and escalating operational risk: the Group registers and analyses operational risk events, including their severity, causes and other important information in an operational risk loss and incident database;
- Conducting scenario and sensitivity analysis and stress-testing;
- Performing business continuity planning: the Group performs regular business impact analysis and has implemented a Disaster Recovery Plan;
- Assigning responsibilities: the operational risk management system includes assignment of responsibilities to certain individuals; and
- Documenting decisions: the Group maintains records in relation to the process undertaken to reach a particular decision or to prevent or mitigate a particular risk.

Operational risk management in the Group is carried out in accordance with Operational Risk Management Policy

EU ORA - Qualitative information on operational risk

Legal basis	Row number	Qualitative information
Points (a), (b), (c) and(d) of Article 435(1) CRR	(a)	Disclosure of the risk management objectives and policies: Information about risk management objectives and policies are disclosed in the caption Operational Risk
Article 446 CRR	(b)	Disclosure of the approaches for the assessment of minimum own funds requirements: Regulatory capital requirement calculation method - Standardised approach. To assess the adequacy of calculated operational risk capital requirement in Citadele Group using the Standardised Approach, an internal capital adequacy assessment for the operational risk utilizing the internal Loss Distribution Approach (LDA) model is used.
Article 446 CRR	(c)	Description of the AMA methodology approach used (if applicable): Not applicable.
Article 454 CRRR	(d)	Disclose the use of insurance for risk mitigation in the Advanced Measurement Approach (if applicable): Not applicable.

INTERNAL CAPITAL ADEQUACY ASSESSMENT PROCESS

The internal capital adequacy assessment process requires estimating individual capital charges for every significant risk type inherent to the Group. The internally developed methodology takes into account greater number of risks compared to what minimum regulatory standards require (e.g. interest rate risk in the banking book, concentration risk, compliance risk etc.). Furthermore, to ensure sustainability even at times of distress, the Group simulates its capital adequacy position under assumptions of an adverse macroeconomic scenario. The following summarises the forward looking assessment of the risk profile for the reporting period, where assessment is based on likelihoods assigned to different adverse deviations from the baseline scenario in terms of capital impact. The annual internal capital adequacy assessment is conducted for a three-year period, which corresponds to the timeframe used in the annual financial and strategic planning process, thereby promoting consistent integration of financial forecasts into capital adequacy evaluation.

Significant risks based on the most recent ICAAP assessment for which internal capital was allocated

Risk type	Exposure class	Risk assessment for the most recent period*	Regulatory capital requirement calculation method	Internal assessment method
Credit and concentration risks	Loan portfolio	High	Standardised approach	Scenario sensitivity approach
	Bond portfolio	Low	Standardised approach	Scenario sensitivity approach
	Counterparties	Low	Standardised approach	Scenario sensitivity approach
Market risk	Position risk in non-trading bond portfolio	High	-	Scenario sensitivity approach
	Currency risk	Low	CRR articles 351-354	Value at risk (VaR)
Operational risk		Low	Standardised approach	Loss distribution approach
General interest rate risk in the banking book		High	-	200bp parallel shift impact on EVE, six scenarios according to the regulatory requirements
Liquidity risk		Moderate	-	Integrated within reputation risk
AML and compliance risk		Low	-	Integrated within operational risk
Reputation risk		Low	-	Scenario sensitivity approach
Business model and strategy risk		Moderate	-	Scenario sensitivity approach

* on a 4-grade scale: low, moderate, elevated, high

PRUDENTIAL DISCLOSURES ON ENVIRONMENTAL, SOCIAL AND GOVERNANCE (ESG) RISKS

Prudential disclosures on Environmental, Social and Governance (ESG) aspects are prepared in line with the requirements of the Article 449a of the CRR.

EU 2022/2453 Table 1 - Qualitative information on Environmental risk

Row number		Qualitative information - Free format
	Business strategy and processes	
(a)	Institution's business strategy to integrate environmental factors and risks, taking into account the impact of environmental factors and risks on institution's business environment, business model, strategy and financial planning	As part of the regular business planning process of the Group, Citadele identifies and assesses relevant climate-related and environmental risks expected to affect the Group in short, medium and long term. Climate-change scenario analysis is performed in addition to assessing the business environment, including macroeconomic variables, competitive landscape, regulatory, societal and geopolitical trends. Current primary climate-related and environmental (C&E) risk focus is on physical risks at portfolio and counterparty level, and transition risk.
(b)	Objectives, targets and limits to assess and address environmental risk in short-, medium-, and long-term, and performance assessment against these objectives, targets and limits, including forward-looking information in the design of business strategy and processes	Citadele has committed to aligning its operations and portfolio with the goals and the timeline of the Paris Agreement. To achieve this objective, Citadele has set the ambition to reach net-zero operations, including financed emissions, by the year 2050. Citadele is working on establishing the baseline, identifying decarbonisation pathways, developing practical plans for achieving the emissions reductions, reporting and monitoring progress on the targets to ensure reaching our climate-related goals by the target date. Risk appetite and climate-related exclusion policies enable us to monitor and achieve climate-related targets and commitments. Citadele's Risk Appetite expressly considers transition and physical risk thresholds. Citadele has carried out an initial climate change scenario analysis to assess the future implications of potential climate change pathways on Citadele's business model and strategy. Citadele is using the NGFS scenario framework to explore a set of scenarios and their potential impact on our business model. The output of our scenario analysis was a qualitative assessment of the scale of changes in the immediate, middle- and long- term, assuming portfolio mix, size, and macroeconomic variables remained unchanged throughout the periods. The analysis shows that Citadele's portfolio is well-positioned for the transition. Both opportunities and risks have been identified for exploring further.
(c)	Current investment activities and (future) investment targets towards environmental objectives and EU Taxonomy-aligned activities	The Group is committed to financing the transition to low-carbon economy and has set annual and medium-term green lending targets. Citadele is cooperating with EBRD and EIB, including financing green projects and assets aligned with specific environmental criteria, and EU Taxonomy Substantial Contribution criteria-aligned projects and assets. The Group has disbursed EUR 115 million in new green lending in 2023 constituting 13% of total new lending.
(d)	Policies and procedures relating to direct and indirect engagement with new or existing counterparties on their strategies to mitigate and reduce environmental risks	Counterparty C&E risk factor assessment is an integral part of large client onboarding process and the monitoring process of existing clients. Within the credit risk assessment process, Citadele considers climate-related and environmental risks, both physical and transitional, and including over time horizon (short, medium, and long term). During 2023 we have extended our C&E risk assessment to include further environmental risks beyond Climate risks. Biodiversity has been identified as area of concern for Agricultural and Forestry industries. We have started assessing risk of potential negative impact on biodiversity for these two segments, identifying exposures in or near protected areas or nature reserves. Citadele is continuing work on integrating ESG risk factors into lending decision process. Citadele is screening new lending projects for eligibility for EBRD and EIB green financing criteria. Citadele has published a Supplier Code of Conduct setting its expectations toward its suppliers and sharing good practice in environmental issues, social standards and good governance. Citadele is working to further strengthen its capacity to identify, assess and report on green projects with advisory support under the EIB Green Gateway facility through the European Investment Advisory Hub in the form of training, development of tools and manuals and on-the-job-support.
	Governance	
(e)	Responsibilities of the management body for setting the risk framework, supervising and managing the implementation of the objectives, strategy and policies in the context of environmental risk management	Citadele ESG Policy sets the framework and main principles for managing ESG-related topics within Citadele Group and sets the ESG governance structure. The Supervisory Board of Citadele is responsible for overseeing the formation and implementation of the ESG strategy. ESG risks are considered when developing Citadele's overall business strategy, business objectives, and risk management framework. The Supervisory Board exercises comprehensive oversight of climate-related and environmental risks.

	covering relevant transmission channels	The Management Board is responsible for developing ESG strategy and execution of the strategy and ensures comprehensive implementation of the ESG Risk Policy in the Group. The Management Board provides regular reporting to the Supervisory Board of the Group on the ESG risk management aspects in the Group.
(f)	Management body's integration of short-, medium- and long-term effects of environmental factors and risks, organisational structure both within business lines and internal control functions	Governance of ESG risk management in Citadele Group follows the overarching principle of three lines of defence: - The first line of defence comprises business and support functions. It is ultimately accountable for the ESG risk management related to its activities and within its area of responsibility. - The second line of defence is the risk management function, performing independent risk oversight and control. The risk management function facilitates implementation of a sound ESG risk management framework throughout the Group. It has responsibility for further identifying, monitoring, analysing, measuring, managing, and reporting on the ESG risk exposures and forming a holistic view of all risks on the individual and the consolidated basis. In addition, the risk management function challenges and assists in implementation of the ESG risk management requirements by business lines. It also ensures that there are processes and controls in place at the first line of defence and that these are appropriately designed and implemented and operate well. - The third line of defence is Internal Audit Department of the Group – an independent and objective assurance function overseeing implementation of the ESG risk framework and controls in the first and second lines of defence.
(g)	Integration of measures to manage environmental factors and risks in internal governance arrangements, including the role of committees, the allocation of tasks and responsibilities, and the feedback loop from risk management to the management body covering relevant transmission channels	ESG Working Group ensures transparent and efficient driving of the overall ESG agenda. The ESG Working Group is composed of dedicated representatives from key functions. The ESG Working Group has a responsibility to ensure that procedures and controls are in place in order to implement and adhere to the ESG objectives, strategy and policies set by the Management Board. The ESG Working Group is led by ESG Officer of the Group. Responsibilities of the ESG Officer of the Group include defining the ESG framework and key goals related to the ESG area in cooperation with heads of the departments affected by the ESG; developing and regularly updating the ESG Policy; training employees in the ESG area; increasing awareness of the ESG matters by ensuring respective external and internal communication; cooperating with the Risk Management Division and heads of units and departments in developing ESG strategic targets and KPIs. Risk Management Division participates in developing, reviewing, and updating ESG Risk Policy; integrates key ESG risk drivers in the Risk Management Framework, Risk Appetite Framework, and relevant Risk Strategies; implements the principles set in the ESG Risk Policy and other regulatory requirements into existing policies, procedures, and processes; cooperates in defining ESG framework, key goals, and critical drivers; and ensures all their employees are familiar with these new processes and adhere to them. All employees of the Group are responsible for ESG risk identification, mitigation, management, and reporting within their area of activity.
(h)	Lines of reporting and frequency of reporting relating to environmental risk	Information exchange on climate-related issues has been integrated into regular management reporting processes. Climate-related risk reporting and risk appetite threshold monitoring is part of monthly and quarterly internal reporting cycles to the Management Board, along with tracking of green lending target fulfilment.
(i)	Alignment of the remuneration policy with institution's environmental risk-related objectives	Allocation of variable remuneration component takes into account all types of current and future risks of the Bank, Group and Group entities respectively, including ESG-related risks. Variable remuneration component is based on a combination of assessment of individual and Company goals. Management scorecard includes ESG-related goals in line with Group's ESG policy. Before paying out the deferred part of any variable remuneration, a reassessment of the long-term performance and, if necessary, risk adjustment (including ESG risks) is applied to align variable remuneration to additional risks that have been identified or may have materialised after the award.
	Risk management	
(j)	Integration of short-, medium- and long-term effects of environmental factors and risks in the risk framework	When considering climate-related risks and opportunities, the Group assesses them in three timescales: short (less than 3 years), medium (3 to 5 years), and long-term (more than 5 years), to account for the changing nature of the ESG risks and their materialization horizon.
(k)	Definitions, methodologies and international standards on which the environmental risk management framework is based	C&E risk management framework of the Group is based on the ECB guide on climate-related and environmental risks, Climate-related financial risks – measurement methodologies and Climate-related risk drivers and their transmission channels - both published by Bank for International Settlements, and EBRD Environmental and Social Risk Management Procedures.
(l)	Processes to identify, measure and monitor activities and exposures (and collateral where	Transition risk materiality assessments are performed at industry level, based on GHG emission intensity. Industry environmental risk is monitored for legal entity lending portfolio and securities portfolio.

	applicable) sensitive to environmental risks, covering relevant transmission channels	Physical risk assessment is performed semi-annually, covering both quantitative and qualitative assessment of material physical risks to collateralized real estate. Citadele is strengthening our C&E risk materiality assessment approach and integrating it with stress testing within ICAAP, a process that is to be finalized during the first quarter of 2024. To facilitate identification of material climate-related risks within sectors and portfolios, we are working on increasing the granularity of assessment. Quantification of exposure to Climate & Environmental risks is part of stress testing procedures, with scenarios developed for Credit Risk (both Physical and Transition risk scenarios), Market risk (combined Physical and Transition risk scenario), and Operational risk (Physical and Transition risk scenarios). Risk drivers and transmission channels are identified as part of C&E risk materiality assessment and inform risk management practices. Credit risk is the key prudential risk category through which C&E risk is likely to materialize for the Group, given its business profile and asset composition. Climate risk drivers can impact households, corporates, SMEs, and sovereigns, reducing income or wealth. As most impacts of climate-related and environmental risk drivers affect multiple areas and materialize in complex ways, we are considering C&E risks in existing categories of risk individually as well as jointly, and in the short-, medium- and long-term.
(m)	Activities, commitments and exposures contributing to mitigate environmental risks	Setting ESG risk limits in Risk Appetite and establishing long-term portfolio GHG emissions goals serves as a proactive mitigation action for C&E transition risk. Other proactive C&E risk mitigating actions include concentration and geographic risk management, and flood risk insurance requirement for immovable collaterals. Reactive actions taken by the Bank include risk transfer through loan securitisation. While structuring transactions with elevated ESG risk levels and exceeding a predetermined threshold of financed amount, the counterparts ESG action plan is considered. It may affect the length, pricing, or other structuring conditions. The material value of Real estate collateral is adjusted to adequately include physical risk assessment. Other detective mitigation methods are being integrated and used, including regular assessment of the current risk level against the desired risk level, trend analysis, risk indicator monitoring, auditing, etc.
(n)	Implementation of tools for identification, measurement and management of environmental risks	Identification, measurement and management tools for environmental risks: - ESG Risk Policy; - Risk Appetite and Risk Strategy – C&E risk limits set and monitored in Lending and Securities portfolios; - Climate physical risk materiality assessment for collateralized real estate; - Client Environmental and Climate-related risk assessment; - Environmental and Climate-related risk materiality assessment performed; - Real Estate collateral energy efficiency (EPC) data collection ongoing.
(o)	Results and outcome of the risk tools implemented and the estimated impact of environmental risk on capital and liquidity risk profile	Environmental risk assessment is included in ICAAP. The ESG risk scenario is calculated as the worst-case scenario between the primary Credit risk-adverse scenario and the Credit Risk ESG scenario. For Liquidity risk profile: Climate-related and Environmental risk materiality assessment for consolidated Deposits and Non-Maturity Deposits portfolio is performed. During Q4 of 2023 and Q1 2024 Citadele has been working on reinforcing the Materiality assessment and integrating it with stress-testing and ICAAP. The extended C&E risk assessment includes operational, strategic, liquidity risk assessment in addition to credit and market risk assessments, and a detailed sectoral and geographic climate risk assessment.
(p)	Data availability, quality and accuracy, and efforts to improve these aspects	Improvements in the quality of collateral address data have been carried out to standardize data and enable geolocation mapping and connection to external physical risk maps. EPC label data collection has been started as standard practice for new lending, with new data fields introduced in data systems. General availability of EPC data remains the biggest challenge as a relatively low proportion of properties have received EPC labels, and the group with certificates includes a disproportionate number of newly built buildings, thus preventing extrapolation of data for use in estimated energy classes.
(q)	Description of limits to environmental risks (as drivers of prudential risks) that are set, and triggering escalation and exclusion in the case of breaching these limits	Material climate-related and environmental risk drivers are included in Risk Appetite and Risk Strategy framework within the prudential risk areas in accordance with the Group's ESG Risk Policy. Citadele's Risk Appetite expressly considers transition and physical risk thresholds. This also includes Key Risk indicators (KRI), regular monitoring and reporting, and escalation process in the case of breaching these limits. During 2023 the Group regularly monitored transition risk via Industry Environmental risk level KRI (internal methodology) which is based on GHG emission intensity of industry. Physical risk monitoring was introduced during 2023, monitoring real-estate

		collateralized portfolio exposure to material physical risks. Citadele monitors exposure concentration by levels of industry environmental risk score, real-estate collateralized portfolio physical risk levels and exposure to material physical risk types as C&E Key Risk Indicators in Lending portfolio. For corporate debt securities portfolio KRIs include industry environmental risk level and weighted external ESG rankings. In addition, Citadele has defined industries that it does not finance due to significant negative environmental and/ or social impact.
(r)	Description of the link (transmission channels) between environmental risks with credit risk, liquidity and funding risk, market risk, operational risk and reputational risk in the risk management framework	Credit risk: - Physical and transition risk drivers increase Bank's credit risk through both the income effect and wealth effect. The Bank identifies income effect as a transmission channel of physical risk when physical hazard events have a negative effect on a borrower's ability to repay and service debt via loss or reduction of income from affected real estate or manufacturing equipment. The Bank recognizes the wealth effect as transmission channel via reduced ability to fully recover the value of an exposure in default because of the reduction in the value of the pledged collateral. Requirement of continuous insurance of collateral is a means of mitigating the risk. - Bank assesses that climate risk drivers can impact households, corporates and SMEs, with a lesser degree of impact to sovereigns in the Bank's portfolio. - Climate-related increases in human mortality and declines in labour productivity are projected to be key drivers of long-term transmission channel of climate-risk through reductions in output and resulting economic implications. - In medium to long term increased borrowing costs due to factoring in C&E risks could lead to higher taxes, lower government spending and reduced economic activity, which may indirectly impact Bank's credit risk. Market risk: - Physical and transition risks can alter or reveal new information about future economic conditions or the value of real or financial assets, resulting in downward price shocks and an increase in market volatility in traded assets. - Climate risk could also lead to a breakdown in correlations between assets or a change in market liquidity for particular assets, undermining risk management assumptions. - Changes in asset values may be driven by a policy change that affects an individual borrower, or by the effect that policy change may have on the economy more broadly. Liquidity risk: - Climate risk drivers may impact liquidity risk directly by affecting Bank's ability to raise funds or liquidate assets, access to stable sources of funding could be reduced as market conditions change. - Climate risk drivers may cause indirect impact through affected counterparties drawing down deposits and credit lines. Operational risk: - If physical hazards disrupt critical services and telecommunications infrastructure, Bank's operational ability may be impacted. - Increasing legal and regulatory compliance risk associated with climate-sensitive investments and businesses may affect the Bank indirectly or directly. - Increasing direct and indirect (via counterparties) reputational risk based on changing market or consumer sentiment. Reputational risk: Failure to reach sustainability-related targets may result in negative customer reaction and loss of market share.

EU 2022/2453 Table 2 - Qualitative information on Social risk

Row number		Qualitative information - Free format
	Business strategy and processes	
(a)	Adjustment of the institution's business strategy to integrate social factors and risks taking into account the impact of social risk on the institution's business environment, business model, strategy and financial planning	Citadele environmental and social risk management is founded on the Bank's strategy of developing business with a long-term perspective and in line with social, environmental, and economic goals in the decisions made, products offered, and services provided. This ensures alignment with the commercial strategy and helps embed environmental and social risk management in the organisational structure and culture. Social risk identification is part of the Group's strategy setting process, and includes analysing changes in consumer behaviour, demographic trends, changes in labour force and technological change.

		Citadele believes that a financial institution's social impact is based on the ability to leverage its expertise, financial products and services to enable people and communities to prosper and grow. Citadele acts based on high ethical and professional standards towards its clients, partners and employees. Being a socially responsible bank, Citadele stands up for: - responsible provision of banking services to promote the Baltic economy; - promoting financial education and literacy in society; - promoting tolerance in society and supporting charity projects for people, animals and nature support; - increasing customer trust in banking and Citadele Group; - making banking services accessible for people at any time and place convenient for them through our digital channel offering; - constantly increase internal ESG competence and promote it in society; - engaging in partnerships with relevant stakeholders to achieve society's goals. Citadele acknowledges its responsibility in contribution to sustainable economic development, which includes responsible, fair, and ethical business practices from its suppliers.
(b)	Objectives, targets and limits to assess and address social risk in short-term, medium-term and long-term, and performance assessment against these objectives, targets and limits, including forward-looking information in the design of business strategy and processes	Citadele is managing social risk factors in both own operations and its value chain affecting the Group. Citadele has a social responsibility towards its employees, customers, and the wider society. Citadele abides by high ethical standards and inclusive approach toward all employees, customers, business partners, and investors. Citadele's employee relations is a significant area for the Group. Citadele provides safe and secure working conditions to its employees, in line with labour-related standards and requirements, national employment, social insurance, occupational health and safety standards. Citadele supports working environment that is free from any discrimination, prejudice, harassment, abuse of powers and undignified attitude. Citadele employment policy framework includes Code of Ethics, and Diversity and Inclusion policies stating the Groups practices and expectations from employees in these vital areas. All Citadele Group employees receive regular mandatory trainings covering AML, sanctions, corruption and fraud risk management. Social risk aspects are integrated into Operational risk management. The Group has set targets and limits for Key Risk Indicators within social risks in regard to employment practices, employee behaviours, incidents, code of ethics breaches, and data security with monthly and quarterly monitoring. Citadele has processes in place to ensure that clients are treated fairly and professionally. Our customer servicing standard sets the professional requirements we expect from our employees when dealing with customers. The Bank is continuously working to make its services accessible. Service continuity and accessibility are regularly monitored against the targets set. Citadele applies the highest standards to its IT infrastructure and security, and it has a dedicated, group-wide cyber security team. Incident management process is defined and followed, including process of identification, mitigation, documentation, and analysis of incident root causes.
(c)	Policies and procedures relating to direct and indirect engagement with new or existing counterparties on their strategies to mitigate and reduce socially harmful activities	Citadele ESG and ESG Risk Management Policies in place that reflect the Bank's commitment to managing social risk factors. The ESG Policy outlines Citadele's approach to ESG factors in Group's own operations, while the ESG Risk Policy outlines approach in the Group's business activities. The Group maintains good human resources management policies and practices appropriate to the business. Work on building employee capacity and engagement is constantly ongoing, including relevant trainings on ESG. Citadele is performing social risk assessments in accordance with EBRD social risk guidelines of new lending projects above predetermined thresholds. Citadele has been monitoring social risk exposure in line with EBRD expectations since 2010 when EBRD became a stakeholder in the Group. The Bank has adopted systematic Climate-related, Environmental and Social risk management processes for business activities in line with the level of risk associated with the business activities. Social And Environmental Risk Assessment is an integral part of the bank's lending process and is conducted for all legal person lending transactions in line with instruction on Environmental, Social and Climate-related Risk Assessment. The Environmental and Social Risk Assessment is carried out (i) when evaluating a new lending transaction for legal persons, or in (ii) assessing changes to the terms of the existing corporate lending transactions that require granting of an additional amount. A publicly available Supplier Code of Conduct summarizes the Bank's requirements in supplier selection, covering environmental practices, labour policies, and good

		governance. The Supplier Code of Conduct includes good practice guidelines for the environmental, social, and governance areas.
	Governance	
(d)	Responsibilities of the management body for setting the risk framework, supervising and managing the implementation of the objectives, strategy and policies in the context of social risk management covering counterparties' approaches to:	Citadele maintains good governance practices, with a clear organisational structure and accountability, defined roles and responsibilities, organisation-wide objectives, and progress monitoring, while ensuring adequate resource management. Supervisory Board is responsible for overseeing the Management Board tasked with establishment and implementation of ESG strategy. Chief Executive Officer is governing body member responsible for the execution of the ESG strategy and implementation of the governance structure set by the Management Board. ESG Officer develops a roadmap for achieving the ESG strategy and objectives and ensures its implementation within the Bank. ESG Officer is a central point of contact for overall sustainability project coordination and is responsible for increasing awareness of ESG matters by ensuring respective external and internal communication. ESG Officer leads the ESG Working Group, composed from representatives of all functions involved in ESG risk management integration into Group's operations. Representatives of functions involved in social risk management are all part of the ESG Working Group:
(i)	Activities towards the community and society	(i) Activities towards the community and society are coordinated by Head of Marketing and Communication department;
(ii)	Employee relationships and labour standards	(ii) Employee relationships and labour standards are managed by Head of HR and Legal divisions;
(iii)	Customer protection and product responsibility	(iii) Customer protection and product responsibilities are with the heads of Business lines and Products;
(iv)	Human rights	(iv) Human rights are embedded into core of the Banks operations and all relevant documentation under the responsibility of Head of Legal division.
(e)	Integration of measures to manage social factors and risks in internal governance arrangements, including the role of committees, the allocation of tasks and responsibilities, and the feedback loop from risk management to the management body	The Group has developed a robust internal legal framework which sets a clear and transparent corporate governance. For timely identification and understanding of corruption risk in operations of its counterparties, the Bank ensures explicit and unequivocal internal rules for risk screening, identification and continuous monitoring, described in a number of policies and procedures, including Corporate Governance Policy, Code of Ethics, Anti-corruption Policy, Anti-money laundering and counter terrorism and proliferation financing policy, and more. All employees are regularly trained in the fields of identifying and preventing bribery, corruption risk and fraud risk. Employees are tested on their knowledge of the relevant risk management policies and procedures annually. Risk Committee monitors the level of risks to which Citadele Group is exposed and the compliance of its operations with permitted level of risks, including C&E and social risks
(f)	Lines of reporting and frequency of reporting relating to social risk	Risks associated with social factors in Group's internal operations are monitored continuously and reported to management bodies in monthly and extended quarterly CRO report, under Operational risk.
(g)	Alignment of the remuneration policy in line with institution's social risk-related objectives	The Group's remuneration policy is in line with the Group's business and risk strategy, objectives, culture and values as well as long-term interests of the Group and its stakeholders. Any paying out of the deferred part of any variable remuneration includes reassessment of the long-term performance and, if necessary, risk adjustment to take into account additional risks, including social, identified or materialised after the award.
	Risk management	
(h)	Definitions, methodologies and international standards on which the social risk management framework is based	Social risk management framework in the Group is based on EBRD Environmental and Social Risk Management Manual and procedures recommended by the EBRD, in line with best international practice in the commercial financial sector.
(i)	Processes to identify, measure and monitor activities and exposures (and collateral where applicable) sensitive to social risk, covering relevant transmission channels	All lending transactions for legal entities are screened for social risk according to thresholds and process outlined in the respective lending procedure and Environmental and Social risk assessment instruction. Applications falling within Bank's environmental and social exclusion list, which is based on EBRD guidelines and extended to cover no-go industries in line with the Bank's risk appetite, are rejected. Applications are further reviewed for environmental and social risk factors and social risk level is determined. Applications with particular social risk characteristics are further reviewed by EBRD.

		Environmental and social risk events for exposures are regularly monitored and reported to EBRD in due course of loan monitoring process, with prescribed remediation actions followed-up. Citadele expects its suppliers to manage sustainability topics within the field of human rights, labour practices, business ethics and the environment. Expectations for supplier ESG risk management are published in Supplier Code of Conduct. Social risk associated with exposures sensitive to social risks, such as clients or counterparties breaching labour law, human rights or other social laws or rights is monitored as part of regular media monitoring.
(j)	Activities, commitments and assets contributing to mitigate social risk	Citadele is committed to ensure supportive work environment that is aligned with today's requirements and standards, with no discrimination, equal opportunities, good working conditions, supporting professional skill and competence development, and employee well-being. Citadele is monitoring employee satisfaction via regular eNPS surveys and Mood Barometer. Citadele is committed to remain among the most desirable employers in the Baltics. The Group's lending exposures are screened and monitored in line with our commitment to EBRD. Citadele is a signatory of UNEP FI Principles for Responsible Banking and is committed to aligning the Bank's strategy and practice with the Sustainable Development Goals.
(k)	Implementation of tools for identification and management of social risk	Managing social and governance risks in addition to C&E risks is important for Citadele, to protect the Group's reputation, avoid legal and regulatory risks, achieve long-term strategic objectives, and contribute positively to society and the environment. Social risk screening in the lending portfolio follows EBRD guidelines. It is integrated in C&E assessment and monitoring process. Social risk in own operations is identified and assessed as part of Operational risk and control self-assessment process. In addition, reputation monitoring is ongoing, and includes external sources as well as employee feedback and employee net-promoter-score (eNPS) assessments.
(l)	Description of setting limits to social risk and cases to trigger escalation and exclusion in the case of breaching these limits	Social risk is monitored under operational risk, and risk limits set within the relevant categories, such as availability and security of Bank's digital services, employee risk, reputational risk. Limit breaches and escalations managed in accordance with procedure for relevant operational risk category.
(m)	Description of the link (transmission channels) between environmental risks with credit risk, liquidity and funding risk, market risk, operational risk and reputational risk in the risk management framework	The Bank has assessed that materialization of social risk within its lending portfolio may manifest: - in credit risk if social risk events prevent or delay the operation of development projects thus delaying or stopping planned income stream for the repayment of Bank's funds, and / or negatively affecting the value of affected collateral; changes in consumer sentiment following a social risk event may negatively affect demand for a borrower's product or service thus negatively impacting its income and repayment of Bank's funds. - social risk drivers may impact liquidity risk through affected counterparties drawing down deposits and credit lines, or if manifesting directly, by affecting Bank's ability to raise funds or liquidate assets, access to stable sources of funding could be reduced as market conditions change. - materialization of social risks for Bank's suppliers may cause a disruption in availability of goods or services purchased. - Reputation may be affected if clients or other counterparties are involved in unacceptable social practices.

EU 2022/2453 Table 3 - Qualitative information on Governance risk

Row number		Qualitative information - Free format
	Governance	
(a)	Institution's integration in their governance arrangements governance performance of the counterparty, including committees of the highest governance body, committees responsible for decision-making on economic, environmental, and social topics	The Bank's operation is based on transparent and sustainable actions in the financial markets. The Bank has a zero tolerance for corruption, and expects the same from its employees, customers, and business partners. The Bank has developed internal legal framework which sets a clear and transparent corporate governance framework. Citadele is committed to avoid corruption and has no tolerance towards financial crime and non-compliance. For timely identification and understanding of corruption risk in operations of its counterparties, the Bank ensures explicit and unequivocal internal rules for risk screening, identification and continuous monitoring, described in a number of policies and procedures, including Corporate Governance Policy, Code of Ethics, Anti-corruption Policy, Anti-money laundering and counter terrorism and proliferation financing policy, Policy for Conflict of Interest in the Rendering of Investment and Ancillary Investment Services, Procedures for Assessment of Reports on Breaches, Monitoring of Transactions, Procurement and more. All employees are trained in the field of the prevention of corruption risk and fraud risk, as well are attested annually of their compliance with the principles prescribed in Anti-corruption policy.
(b)	Institution's accounting of the counterparty's highest governance body's role in non-financial reporting	Non-financial reports of counterparties are identified in due course of process, either procurement or lending, and further analysed manually, including taking into account the role of the counterparty's highest governance body in non-financial reporting.
(c)	Institution's integration in governance arrangements of the governance performance of their counterparties including: (i) Ethical considerations (ii) Strategy and risk management (iii) Inclusiveness (iv) Transparency (v) Management of conflict of interest (vi) Internal communication on critical concerns	The Group's Risk Appetite framework integrates governance of counterparty assessment, including tolerance of risks related to counterparty governance arrangements. The Bank adheres to strict know-your-customer procedures, which include requirements and good practice expectations for counterparty internal governance processes, including ethical considerations, anti-bribery and anti-corruption measures, internal controls, risk management policies and management of conflicts of interest. The Group refrains from engaging in activities or cooperation with counterparties that entail or might potentially entail raised reputational risks irrespective of financial benefits and rewards. Transparency and inclusiveness disclosures are expected to be included in counterparty non-financial reporting in line with the level mandated by regulatory requirements pertinent to the counterparty.
	Risk management	
(d)	Institution's integration in risk management arrangements the governance performance of their counterparties considering: (i) Ethical considerations (ii) Strategy and risk management (iii) Inclusiveness (iv) Transparency (v) Management of conflict of interest (vi) Internal communication on critical concerns	A publicly available Supplier Code of Conduct is binding for any new suppliers. The Supplier Code of Conduct summarizes the Bank's requirements in supplier selection, covering environmental practices, labour policies, and good governance, including good practice guidelines for these areas. Governance areas considered include ethics; no tolerance for bribery and corruption; management of conflict of interest; inclusiveness and transparent governance. The Bank itself adheres to Code of Ethics, based on regulatory requirements and industry good practices. The Code of Ethics includes selection of and cooperation with counterparties, management of conflict of interest and whistleblowing arrangements.

EU 2022/2453 Template 4: Banking book - Climate change transition risk: Exposures to top 20 carbon-intensive firms

	a	b	c	d	e
	Gross carrying amount (aggregate)	Gross carrying amount towards the counterparties compared to total gross carrying amount (aggregate)*	Of which environmentally sustainable (CCM)	Weighted average maturity	Number of top 20 polluting firms included
1	-	-	-	-	-

*For counterparties among the top 20 carbon emitting companies in the world. As at the end of 2023, Citadele had no exposures to the top 20 most polluting companies and their subsidiaries. Data about Top 20 most polluting firms in the world, with reference year 2020, was sourced from Carbon Majors database: https://climateaccountability.org/carbon-majors-dataset-2020/

EU 2022/2453 Template 1: Banking book- Climate Change transition risk: Credit quality of exposures by sector, emissions and residual maturity

Columns on "environmentally sustainable (CCM)" and "GHG emissions" exposures are to be reported in the future, but no for the current period. Maturity is reported based on the gross amounts and (as per regulatory requirements) based on the final maturity of the exposure and not the contractual maturity which would be more consistent with the actual expected repayment cash flows.

.		a	b	c	d	e	f	g	h	i	j	k	l	m	n	o	p
	Sector/subsector	Gross carrying amount (Mln EUR)					Accumulated impairment, accumulated negative changes in fair value due to credit risk and provisions (Mln EUR)			GHG financed emissions (scope 1, scope 2 and scope 3 emissions of the counterparty) (in tons of CO2 equivalent)		GHG emissions (column i): gross carrying amount percentage of the portfolio derived from company-specific reporting	<= 5 years	> 5 year <= 10 years	> 10 year <= 20 years	> 20 years	Average weighted maturity

* In accordance with the Commission delegated regulation EU) 2020/1818 supplementing regulation (EU) 2016/1011 as regards minimum standards for EU Climate Transition Benchmarks and EU Paris-aligned Benchmarks -Climate Benchmark Standards Regulation - Recital 6: Sectors listed in Sections A to H and Section L of Annex I to Regulation (EC) No 1893/2006

** NACE code based, not considering any mitigating aspects or for example for "D35.11 - Production of electricity" whether electricity is generated with renewables or from fossil sources.

EU 2022/2453 Template 2: Banking book - Climate change transition risk: Loans collateralised by immovable property - Energy efficiency of the collateral

EPC label data collection has been started as standard practice for new lending, with new data fields introduced in data systems. During 2022 EPC data collection was carried out and updated in 2023 for existing collateral portfolio was carried out. Effort included cadastral number data cleaning and linking to external data providers like Land Registrars in Latvia and Estonia, and data collection services in Lithuania. General availability of EPC data remains the biggest challenge as a relatively low proportion of properties have received EPC labels, and the set of properties with certificates includes a disproportionate number of newly built buildings, thus preventing extrapolation of data for use in estimated energy classes. Unbuilt land collateral is estimated at 0 kWh/m² energy efficiency. Properties with expired EPC certificate are excluded form "EPC label of collateral" disclosure, but included in the estimated "EP score in kWh/m²" of collateral based on the expired EPC certificates.

EU 2022/2453 Template 5: Banking book - Climate change physical risk: Exposures subject to physical risk

Citadele's assessment of climate change physical risk is performed for the real estate collateral pledged as security for loans originated by the Group. Physical risk assessment considers 8 climate hazards, evaluating the potential impacts of: riverine flood, coastal flood, water stress, drought, extreme heat, wildfire, earthquake, landslide and biodiversity impact. Our assessment is performed at address level and considers levels of individual climate hazards as evaluated by multiple external sources. Physical Risk assessment is performed semi-annually. Climate-related hazards are divided between acute and chronic risk groups according to the mapping provided in EU Taxonomy Climate Delegated Act Annex A. The largest relevant physical risk categories identified are flood (river and coastal), draught and related water stress. No exposures were identified as subject to Extremely high or High-Extremely high risk. Current collateral location coverage data availability rate is 81%. Medium risk is assigned for the 19% of the collaterals for which coordinates could not be obtained. Assessment of the climate change physical risk covers exposures collateralised by immovable property, but not other types of exposures to physical risk such as location of income-generating facilities that are not directly pledged. Thus climate change physical risk is not disclosed by sectors as current data availability does not provide sufficient information on all potential locations of impact. Even for exposures collateralised by immovable property, the current approach might have limitations, by not considering other enhancement factors of the respective exposure other than the pledged collateral, nor does it take into account potential local physical risk mitigation measures at the level of specific property.

EU 2022/2453 Template 6. Summary of GAR KPIs

Citadele's Taxonomy disclosures for the financial year 2023 relate to exposures to Taxonomy-eligible and -aligned assets for climate change mitigation and climate change adaptation objectives. The assets in scope for disclosures for 2023 are retail exposures as set out in the Taxonomy, exposures to undertakings falling under the NFRD, including financial and non-financial undertakings, local government financing, collateral obtained by taking possession. The reporting is based on data originating from internal core banking systems and external data for the purposes of NFRD undertaking's disclosed Taxonomy eligibility and alignment for the financial year 2022. For residential real estate lending for buildings built before 31 December 2020, substantial contribution has been assessed as a valid EPC class A or above.
